An online survey to examine the impact of the Covid-19 pandemic on people with motor neuron disease

We are interested in the experiences of people with motor neuron disease (MND) during the Covid-19 pandemic. We would like to know how people with MND have been affected by the pandemic, and whether this has had any impact on their MND health and social care (such as hospital appointments and access to services and care). We would like to use this information to inform MND health and social care services about how they can best meet the needs of people with MND during the COVID-19 pandemic.

If you are aged 18 years and over, you have a diagnosis of MND, and you live in England, Ireland, Scotland or Wales then we would really like to hear from you. If you decide to take part in the study then you will be invited to complete an online survey. You will be asked a series of questions about the Covid-19 pandemic and your MND health and social care. You will also be asked some questions about your MND symptoms. The survey should take approximately 30 minutes to complete.

If you are interested in taking part then please go to:
